McKINNEY, BANCROFT & HUGHES GIVES BACK TO THE COMMUNITY THIS CHRISTMAS SEASON

The attorneys of McKinney, Bancroft & Hughes recently donated professional clothing to The Bahamas Crisis Centre as part of their End-of-Year Community Service Project.

During the presentation, associates received a warm welcome and toured the Centre to learn more about the invaluable work the organization does in the local community.

Ms. Knowles, a member of the Centre's administrative team, expressed appreciation for the donation, noting that the clothing will assist clients of the Centre as they attend job interviews, Court proceedings and other important engagements which require professional representation.

MB&H is proud to continue its commitment to community-focused initiatives that make a meaningful difference within our community.

CELEBRATING A MAJOR MILESTONE

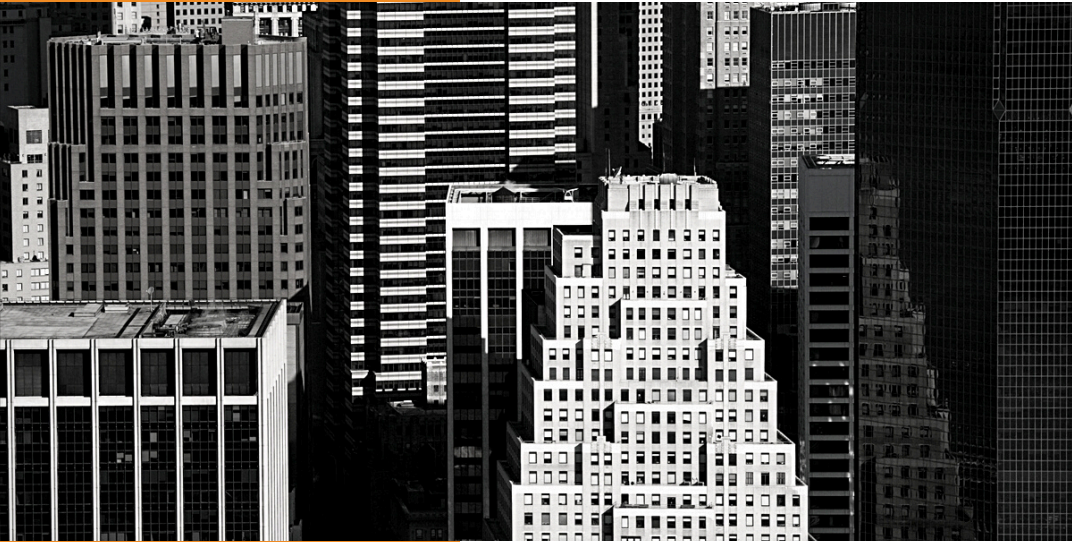

Royal Beach Club Ribbon Cutting

Partners **Kimberley Rolle** and **Gia Sands**, along with Consultant **H. Campbell Cleare**, recently attended the ribbon-cutting ceremony for Royal Beach Club; the first cruise line beach destination located in Nassau, Bahamas. This Real Estate Team has been involved with this project since inception and is pleased to see it come to fruition. We commend all involved for their collaboration and dedication in bringing this landmark project to completion.

REACHING OUT

Environmental health is the branch of public health that is concerned with all aspects of the natural and built environment that may affect human health. Other terms referring to or concerning environmental health are environmental public health, and public health protection / environmental health protection

REACHING THE BOILING POINT

Environmental health professionals may be known as environmental health officers, public health inspectors, environmental health specialists, environmental health practitioners, or sanitarians. Researchers and policy-makers also play important roles in how environmental health is practiced in the field. In many European countries, physicians and veterinarians are involved in environmental health.[citation needed] In the United Kingdom, practitioners must have a graduate degree in environmental health and be certified and registered with the Chartered Institute of Environmental Health or the Royal Environmental Health Institute of Scotland.[3] In Canada, practitioners in environmental health are required to obtain an approved bachelor's degree in environmental health along with the national professional certificate, the Certificate in Public Health Inspection (Canada) CPHI(C).[4] Many states in the United States also require that individuals have a bachelor's degree and professional licenses in order to practice environmental health.[citation needed] California state law defines the scope of practice of environmental health as follows

MB&H ATTENDS BAHAMAS BAR ASSOCIATION ANNUAL CHRISTMAS PARTY

MB&H recently attended the Bahamas Bar Association's Annual Christmas Party. It was a great opportunity to network with fellow legal practitioners and celebrate the close of another year.

MB&H SUPPORTS BAHAMAS FEEDING NETWORK GOLF TOURNAMENT

Consultant Brenford Christie

Partner Alexander Christie

In the season of giving, Partner **Alexander Christie** and Consultant **Brenford Christie** also represented MB&H at The Bahamas Feeding Network's Golf Tournament, Tee-Off for Hunger.

As a proud Gold Sponsor, the firm helped provide enough food parcels to feed approximately 200 families of four for about 3-4 meals. MB&H extends its appreciation to the organizers for hosting a meaningful event that continues to give back to the community.

Over 100 persons participated in the Golf Tournament and it comprised over 50 teams of two people.

PEACE CANNOT BE KEPT BY FORCE

OPTIMISM OF HOPE

Exposure science studies human exposure to environmental contaminants by both identifying and quantifying exposures. Exposure science can be used to support environmental epidemiology by better describing environmental exposures that may lead to a particular health outcome, identify common exposures whose health outcomes may be better understood through a toxicology study, or can be used in a risk assessment to determine whether current levels of exposure might exceed recommended levels. Exposure science has the advantage of being able to very accurately quantify exposures to specific chemicals,

ECOLOGY WATCH

Information from these three disciplines can be combined to conduct a risk assessment for specific chemicals, mixtures of chemicals or other risk factors to determine whether an exposure poses significant risk to human health (exposure would likely result in the development of pollution-related diseases).

FEATURE

Environmental health is the branch of public health that is concerned with all aspects of the natural and built environment that may affect human health. Other terms referring to or concerning environmental health are environmental public health, and public health protection / environmental health protection.
